Hi, I'm Emre

I develop software to make a difference in the world. Thank you for taking the time to read my resume.

Summary

I am an autodidact developer, having taught myself various new technologies while frequently working with start-ups. I love programming and crave to make a difference in the world. I believe I can add value to your company in reaching its objectives.

Work Experience

Self Employed

Full-stack Developer

February 2021 - February 2022 *12 months* Turkey - Istanbul/Balat

I developed products for companies as a freelancer and I've completed a lot of projects successfully. **Some of the projects I've worked on:**

1. An **economics dictionary app**. I accomplished the whole process of designing and developing to publishing in a short period of time.
2. A mobile Flutter app that I did maintenance on. This was a private app that interacts with noise canceller headphones via Bluetooth and measures environment sound, applying noise reduction if required. I learned flutter basics with a Bluetooth module, fixed some tiny bugs, and improved the data structures.
3. An admin dashboard related to my second gig. It visualizes incoming data from the mobile app.
4. A **carbon calculator** web app that calculates the greenhouse gas impacts of construction activities. I implemented the company's calculation formulas and I created the interface.
5. A private bet blog with a content management system. The system was able to do things that WordPress can't do like managing multiple posts on different tabs at the same time or injecting customizable components into a blog post. Besides that, it was able to generate AMP pages and important SEO features like structured data and sitemap.
6. A business website and CMS. I created the digital existence of **Estefulya**. I designed the website and the logo, and I've spared so much time on SEO and got great metrics. The CMS was Netlify's. There is no back-end and everything is working on the Jamstack workflow. I also helped them with the emails, business analytics, and registering their company on some platforms.
7. A simple **liquor website**

> Outside of my gigs, I wasn't idle. I was learning new technologies and working on my **open-source** and **side project**.

Bontesoft

Front-end Intern, Front-end developer, Full-stack developer

February 2020 - February 2021 *12 months* Turkey - Istanbul/Besiktas

> This was a start-up company in Istanbul. Here, I started as an intern but took on too many responsibilities because I love what I am doing and become a front-end developer shortly. I also had a chance to prove my old back-end skills by solving some problems beyond my duties while had completed a couple of front-end projects. A few months later, I become a full-stack developer. After the promotion, I heavily worked on the MVP apps with the designer and fulfilled the customers' needs with the product manager.

In my front-end role, I maintained the company's existing SaaS. I built an interactive interface for an e-commerce website and I built a landing page for a bank. **When I become full-stack** I've completed 3 MVP apps. I had always written the interfaces from scratch, exactly as their design. I modeled relational databases and created REST APIs. I implemented RTC and cron schedulers...

Also, when the resources were not enough I was assigned to fix the company's other project tasks. I usually fixed front-end bugs. Once I solved a complicated SQL problem in the company's SaaS. The existing query was so slow and I helped to reduce the response time from ~30 sec to ~5 sec.

BSM Technical Project LTD
Web Developer
June 2019 - December 2019 *7 months* Turkey - Istanbul/Sisli

This was a newly founded company in the construction area. I was there from the very beginning and my work was versatile. I had done programming, designing, copywriting, and sometimes social media editor.

In my web designer role, I designed their logo, their promotional stuff like brochures, and their business cards. I wrote an admin panel that can send offering emails according to the company's stocks and converts approved offers into billings (JQuery and PHP). I created their **website** and I wrote the whole content as I can.

> The things I did here had a direct impact on the company's workflow efficiency and finding potential customers. But later, I had to leave because I wanted to focus on programming.

Istanbul Cerrahi Hospital
IT Intern
August 2016 - August 2017 *12 months* Turkey - Istanbul/Nisantası

I worked here to complete my vocational school' internship program. I mainly worked on excel programs which taught me the fundamentals of data structures, data collection, and data processing.

> Besides being a seasonal intern I did a good job and helped the technical service department to increase efficiency in logistics and inventory management, and I had become key personnel for the manager.

Education

Doğus University
Software Engineering
August 2019 - Present Turkey - Istanbul/Acıbadem

At my university, I learned/learning the foundations of software engineering. Also, I've learned the basics of C++, Java, Python, and R.

Sultanahmet Vocational High School
Information Technologies
September 2013 - June 2017 Turkey - Istanbul/Sultanahmet

Here, I met with web technologies. I learned HTML, CSS, Javascript, C#, PHP, and MSSQL as well as operating systems and computer hardware.

> I had developed more than 20 websites for my classmates' and other class students' vocational homework projects. I mostly used HTML, CSS, and JS. I had earned a fair amount from each friend and contributed to their grades.

Activities and societies
I joined the theatre club and played the sultan's right hand.

Projects

Lorinto - Social Network Project Lorinto
2019 November - Present

I wanted to develop something that current social blog platforms don't have and I hope Lorinto will have a place in the real world.

Mavi - Open-source Project mavi
2021 November - Present

Create an abstracted and extendible server from one JSON file! This module aims to lift repetitive works that you have made every time building a server from scratch.

Skill Details

I don't feel constrained by tools and welcome using various languages, frameworks, programs, and modules. I am a fast learner and look forward to growing my skills through projects that are purposeful.

Front-end Development

- Vue
- React
- HTML
- CSS
- JavaScript
- TypeScript
- Jest (unit)

Back-end Development

- Node.js
- Express
- Firebase
- Socket.io
- Knex
- RDBMS
- Nginx
- Jest (unit)

Mobile App Development

- React Nati
- Responsiv
- Ionic

Web App Development

- Nuxt
- Next
- PWA
- SPA
- SSR

Data Science

- SQL
- NoSQL
- Excel
- AI

UI Design

- Adobe Phc
- Adobe Illus

DevOps

- Git
- Git Action
- Linux
- PM2

Cloud

- AWS
- GCP

> The values are correlated with the combination of my professional experience and the rate of my successful problem solving on the subject

About Me

I was born in Istanbul on 27 February 1999. I am living on the European side of Istanbul, still a student at the Dogus University 3rh grade. I always worked all through my college life but gave the same attention as my work to my classes as well. I like riding a motorcycle, and playing electro guitar (but I am terrible at it). My English is not perfect (I learned it from the internet), but I believe it's decent for communication.

I value friendship, being helpful, being optimistic, keeping my promises, being a reliable person, and not being selfish.

My biggest goal is to create a popular software that influentially encourages people to be useful individuals for their society and better for the world.
